

SAP Technical Interview Guide

ABAP & Basis

Domain practice questions

1. Explain internal tables and when to use standard, sorted or hashed tables.
2. Describe performance-safe database access and how to avoid SELECT inside loops.
3. Explain enhancements, interfaces and debugging a failed business transaction.
4. Describe the purpose of a transport landscape and safe deployment checks.
5. Explain background jobs, system monitoring and common troubleshooting steps.
6. Discuss authorization checks and secure handling of business data.

Build a strong answer

Start with the business problem or technical context. Explain the approach, key decisions and tradeoffs. Give a concrete example and state the result. If you do not know, explain what you would investigate rather than guessing.

Project discussion checklist

Prepare a two-minute project introduction. Be ready to explain your contribution, architecture or business flow, test cases, one challenge and how you resolved it. Use only projects you can genuinely demonstrate.

Before your interview

Review the job description, revise your fundamentals, test your meeting setup and prepare questions for the employer. Keep your resume accurate. Practice a concise introduction and an example of teamwork using Situation, Task, Action and Result.

Preparation material only. These are not official employer questions. Selection depends on employer requirements and interview performance. Contact: info@sktechlearn.com
